[Ala_host="nto-resistant and the stage of the modified polylinker; lst strand cDNA was prepared from pooled lung tumor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to ECO RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and ECO RI sites of the modified pTT3 vector. Library went through one round of normalization, Library constructed by Bento Soares and M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Email: cgapbe-r@mail.nih.gov

/note=="Organ: lung; Vector: pT7T3D-pac (Pharmacia) with a notified polytinker; plasmid DNA from the normalized modified polytinker; plasmid DNA from the normalized modified polytinker; plasmid DNA from the normalized in trace. Following HAP purification, this DNA was made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from a pool of 5,000 clones made from the same library (cloneIDs 141920-1417991 and 1520904-1522439). Subtraction by Bento Soares and M. Fatima Bonaldo.

/clone_lib="NCI_CGAP_Col6"
/note="Organ: colon" Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_l: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_CGAP_Col0 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1057416-1061255, and 114484-1145351).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligomoufsotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the contains Into sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Bammalia; Butheria; Primates; Catarrhini; Hominidae; Homo.

/note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I; NCI_CGAP_DHO is a cDNA ibrary containing the following tissue(s): vS-8 cell line from Metastatic Chondrosarcoma in Lung. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-86, 1966, 1966, 1961 strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and clonned directionally into pT7T3-Pac vector. The oligonucleoride used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this TAG_LIBSUE-H-DHO TAG_LIB-UH-H-DHO TAG_SEQ=AGATCATTGC.

Patent No. 6607879
GENERAL INFORMATION:
APPLICANT: Cocks, Benjamin G.
APPLICANT: Susan G. Stuart
APPLICANT: Offirey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE
TITLE OF INVENTION: EXPRESSION
NUMBER OF SEQUENCES: 1508
CORRESPONDENCE ADDRESS:
ADDRESSES: INCTE PHARMACEUTICALS, INC.
STREET: 3174 PORTER DRIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 AATTTTGTTTGTTGATGTGAAACATTATGCCTTAAGTAATGTTAATTCTTATTTAAGTTA

Patent No. 6001649

GENERAL INFORMATION:
APPLICANT: CAUT, Daniel
APPLICANT: PERRARA, Pascual
APPLICANT: WILLOW, Brigitte
APPLICANT: WINTY, Adrian
APPLICANT: WINENTION: Protein having a cytokin type
TITLE OF INVENTION: Protein having a cytokin type
TITLE OF INVENTION: Protein having a cytokin type
TITLE OF INVENTION: Protein having a cytokin type
TITLE OF INVENTION: Protein having a cytokin type
TITLE OF INVENTION: Action
TITLE OF INVENTION: Action activity, and recombinant DNA, expression vector and hosts
TITLE OF INVENTION: Action activity, and recombinant DNA, expression vector and hosts
TITLE OF INVENTION: Action activity, and recombinant DNA, expression vector and hosts

j Sequence 762, Application US/09328352

j Patent No. 6562958

j GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPBUTICS

TITLE OF INVENTION: UNMBER: US/09/328,352

CURRENT APPLICATION UNMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 761
sequence 1357, Application US/09902540

patent No. 6833447

GENERAL INFORMATION:
APPLICANT: Goldman, Barry S.
APPLICANT: Hinkle, Greegory J.
APPLICANT: Staten C.
APPLICANT: Wiegand, Roger C.
TITLE OF INVERTION: Myxococcus xanthus Genome Sequences and Uses Thereof FILE REFERENCE: 38-10 (15849)

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone

On Jun 29, 2002 this sequence version replaced gi:16973721.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

RP23-155E23 is a partial sequence. The remainder of RP23-155E23 is covered by an overlap with clone RP23-110F14 (AC096863).

Approximately 2kb of the overlap is included in this submission for reference. The overlap is as follows: base 14 to base 2777 on RP23-155E23 matches from base 131225 to base 134001 on RP23-110F14.
                                                                                                                                                                                                                                                                                                                                                                                           ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Direct Submission

Submitted (16-JUL-2002) Lita Annenberg Hazen Genome Sequencing Center, Cold Spring Harbor Laboratory, 1 Bungtown Road, Cold Spring Harbor, NY 11724, USA
Harbor, NY 11724, USA
On Jul 26, 2002 this sequence version replaced gi:16117547.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction diggest.

RP23-239M9 overlaps clone RP23-155E23 (AC093922) from base 1 to base 56914. The overlap is from base 53016 to base 109929 on
                                                                                                                                  /clone_hes_Rect_23"
/clone_lbs=Rect_23"
61234._.61266
/note="We believe the assembly to be correct. The sequence is covered by a single high quality subclone sequenced with dye terminator chemistry. The assembly is consistent with restriction digest information."
90140...90343
/note="We believe the assembly to be correct. The sequence is a dinucleotide (T) (Cn) repeat in which the exact number of repeat copies is unknown. Two subclones span the repeat into unique sequence on both sides."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              90164 GAGGGAGAGGGAGAGGGAGGGAGTTATTGATCTTTTTCCTTGGACCCATCCAGCTATT 90105

On Mar 11, 2003 this sequence version replaced gi:23306132.
This sequence was finished as follows unless otherwise noted: all This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate regions were either double-stranded or sequenced with an alternate of the more than one plasmid subclone; all regions were covered by more than one plasmid subclone; and the assembly was confirmed by more than one plasmid subclone; and the assembly was confirmed by more than one plasmid subclone; and the assembly was confirmed by estriction digest. The nucleotide sequence of this BAC clone was generated by combining Syngenta, Monsanto and Arizona Genomics generated by combining date There is only Syngenta reads from base 123135-123143 there is an A run where the 55503-57821. From base 123135-123143 there is an A run where is a run of about 15 °C's from base 13951-139618 there are A pop up in a couple of reads.From base 13951-139618 there are are 31-30 TA tandem repeats. There are Bacterial Transposons at the

Estimated insert size: 194000; agarose-fp estimation
Quality coverage: 6.22 in Q20 bases; sum-of-contigs estimation

* NOTE: This is a 'working draft' sequence. It currently
* consists of 24 contigs. Gaps between the contigs
* are represented as runs of N. The order of the places
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* This sequence will be preserved.
* 19139 19238 gap of unknown length
* 19239 28743: contig of 19138 bp in length
* 28744 30952: contig of 2109 bp in length
* 28944 30952: contig of 2105 bp in length

The invention relates to a novel nucleic acid molecule (I) comprising a sequence encoding monocyte-chemoattractant-protein-1 (MCP-1) or a protein acid of the biological activity of MCP-1. A protein encoded by a nucleic acid of the invention has cytostatic, and antiarteriosclerotic activity. A nucleic acid of the invention may have a use in gene therapy. A compound of the invention is useful in the preparation of a medicament for the treatment of atherosclerosis or cancer e.g. cervical carcinoma. A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel nucleic acid molecule encoding monocyte-chemoattractant-protein-1, useful in gene therapy, for treating atherosclerosis and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; SEQ ID NO 3; 30pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Roesl F, Soto U, Coy

identify a molecule or compound that specifically binds a cDNA of the invention. A protein encoded by the CDNA may be used to screen several molecules or compounds to identify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can the protein, or to protein in a sample or purify a natural or combinant protein from a sample. The nucleotides may be useful for recombinant protein from a sample. The nucleotides may be useful for disease, hypertension, diabetes, pre-eclampsia, ischaemia- reperfusion of a vascular disease, e.g. atherosclerosis, cancer, coronary artery consists, restensis, or stroke. The cDNAs can also be used for large-scale injury, restensis, or stroke. The cDNAs can also be used for large-scale injury, restensis, or stroke. The cDNAs can also be used for large-scale concerts or gene expression analysis of several new nucleic acid genetic or gene expression analysis of several new nucleic acid concerts. Antibodies to the proteins encoded by the cDNAs are useful for molecules. Antibodies to the proteins encoded by the cDNAs are useful for associated with abnormalities in the expression, amount or distribution confirmed protein. The present sequence represents a cDNA of the invention confirmed that is differentially expressed in activated vascular tissue. Note: The sequence data for this patent did not form part of the specification, but the confirmed in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Testing candidate drug for treating age-related macular degeneration, by administering drug to Cc12-deficient, Ccr2-deficient knockout mouse, and analyzing development or regression of drusen and/or lipofuscin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a combination comprising several cDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed connas in a sample. The cDNAs of the invention may have antiatreticaclerotic; cytosteric; cardiant; hypotensive; antidiabetic; gynaecological; vasotropic and cerebroprotective activities and may be used in gene therapy. The cDNAs of the invention may be used in a high-throughput methods for detecting differential expression of one or more cDNAs in a sample, or screening several molecules or compounds to

```
comprising: (a) a sequence comprising at least 15 contiguous nucleotides of a sequence comprising variant sequences (A) from Table 4 given in the specification; or (b) a sequence that is complementary to (A). Also described: (1) an array of (PN)s comprising two or more of the isolated (PN)s; (2) detecting a (PN) in an individual; (3) a computer-readable storage medium, where each record has a field identifying a base occupying a (PN) site and a location of the polymorphic site; and (4) a signal carrying data for access by a application program having executed on a data processing system. The (PN) can be used for detecting loci associated with multiple sclerosis. ACF64025 to ACF6424 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               217 STCTTCTCCTGCCTGCCTTTTGCTTTTTCCTCATGACTCTTTTCTGCTCTTAAGATCAGA 276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New genetic variants having polymorphisms in the small inducible cytokine Al (SCYA2 ) gene, useful for studying the function of SCYA2 , and for treating disorders affected by expression or function of the SCYA2
                                                                                                                                                                                                                                                                                                                                                                                                                                                   157 CAAAGATCACATTCTAGCTCTGAGGTATAGGCAGAAGACACTGGGATTTAATGAGCTCTTT

                                                                                    This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated mecular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular CC12-deficient, CCr2-deficient and/ or a Cc12-deficient/CCr2-deficient dual knockout mouse. The present invention describes analyshing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordinally, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polynucleotide sequence is the human Cc12 gene and enchancer region DNA of the invention.

                            The invention relates to single nucleotide polymorphisms in the gene encoding human small inducible cytokine A2 (SCYA2) polymeptide. A method encoding human small inducible cytokine A2 (SCYA2) polymeptide. A method conformation of the SCYA2 gene in a individual comprises identifying the for haplotyping at one of the SCYA2 haplotypes given of the copies of the gene is defined by one of the SCYA2 haplotypes given of the specification or whether both copies are defined by a haplotype pair. This method is useful in genotyping, whereby all possible haplotype copair. This method is useful in genotypes. An association between a pair and a haplotype or haplotype pair of the SCYA2 gene can be trait and a haplotype or haplotype pair of the haplotype or haplotype pair in a reference population, where a higher haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or haplotype or h

                                                                                                                                                                                             The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CICTICICCIGCCIGCTITITGCTITITCCICALGACICTITICIGCTCTIAAGAICAGA 120

                                                                                           The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                            genetic variants having polymorphisms in the small inducible cytokine (SCYA2) gene, useful for studying the function of SCYA2, and for ating disorders affected by expression or function of the SCYA2
                                                                                                                                                                                                                                                                                                                                                                                                          121
                                                                                                                                                                                                                                                                                                                                          61
 fragment of chemically modified gene, useful for of diseases associated with abnormal cytosine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
```

```
concoding human small inducible cytokine A2 (SCYA2) polypeptide. A method for haplotyping the SCYA2 gene in an individual comprises identifying the nucleotide at one or more polymorphic sites and determining whether one of the copies of the gene is defined by one of the SCYA2 haplotypes given for the copies of the gene is defined by one of the SCYA2 haplotypes given in the specification or whether both copies are defined by a haplotype cypeles. This method is useful in genotyphing, whereby all possible haplotype pairs can be assigned to specific genotypes. An association between a trait and a haplotype or haplotype pair of the SCYA2 gene can be considentified by comparing the frequency of the haplotype or haplotype pair in a reference population, where a higher haplotype or haplotype pair in a reference population, where a higher haplotype con haplotype pair. SCYA2 and its corresponding DNA are used for studying the expression and function of SCYA2, and in screening for candidate drugs to treat diseases related to SCYA2, and in screening for candidate drugs to treat diseases related to SCYA2, and in screening for candidate drugs to treat diseases related to SCYA2, and in screening for satherosclerosis. This sequence represents human SCYA2 modified DNA that shows the polymorphic sites in a uniform format to facilitate electronic searching of the SCYA2 haplotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determining whether an individual is predisposed to susceptibility to low bone mineral density (BMD) and/or bone damage, involves identifying

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by (GCA), by detecting the level of expression of gene(s) (GS) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the modulating GCA or an inflammation (especially chronic) in a capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a profile; (3) detecting (M4) an inflammation (especially chronic) in a profile; (3) detecting (M4) an inflammation (especially chronic) in a pathogen or sterile inflammatory disease, by detecting the level of pathogen or sterile inflammatory disease, by detecting the level expression in a sample of the tissue of gene(s) from GS, where the level
                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.
present invention which can be used for the prevention or treatment of a disease resulting in susceptibility to low BMD and/or bone damage is useful in the manufacture of a medicament for use in medulating the susceptibility to low BMD and/or bone damage. The disease associated with low BMD and/or bone damage is osteoporosis. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                149
